

VSM

Management Platform for VIA Devices

VSM (VIA Site Management) is an advanced software management platform that enables an administrator to deploy, manage, configure, and monitor all connected VIA devices from one central location. VSM is compatible with all VIA device models and is available in on-prem and cloud-based versions

FEATURES

- Deployment** - Easily on-board all your VIA devices across networks
 - Management** - Organize VIA devices and create settings templates
 - Configuration** - Set defaults and configure features
 - Health Checking** - Monitor storage level, On/Off statuses, and current firmware version
 - Usage Analytics** - Create usage reports for all of your VIA devices
 - Alerts** - Set customized messages to display on VIA screens as needed
 - Digital Signage** - Manage content, create templates and schedule campaigns
 - Automated Device Updating** - Schedule and automatically push new firmware updates
- Available in On-Premises and Cloud-Based Versions**
- Free Demo** - Try VSM managing functions for up to 3 devices in the on-prem version
